DETAILED ACTION

ELECTION/RESTRICTIONS

This application is in condition for allowance except for the presence of claims 10-13 to a power system non-elected without traverse. Accordingly, claims 10-13 been cancelled.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claims 10-13 have been cancelled.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the instant claims are allowable over the prior art of record, because the prior art is silent to a method for producing hydrogen gas from a hydrocarbonaceous material, using a reaction apparatus that includes means for absorbing and releasing thermal energy and having a heat-transfer surface, comprising the following steps, carried out cyclically:

- (a) bringing a quantity of a hydrocarbonaceous material into contact with said heat-transfer surface of said means for absorbing and releasing thermal energy, heated to a

temperature T_{\max} , to effect pyrolysis thereof and thereby to produce quantities of solid carbon-rich residue and hydrogen gas;

(b) effecting combustion of at least a first portion of said quantity of said carbon-rich residue produced in said pyrolysis step; and

(c) utilizing at least a portion of the thermal energy produced in said combustion step to heat said means for absorbing and releasing thermal energy to said temperature T_{\max} , for effecting said pyrolysis step in the next succeeding cycle of said method.

The prior art, such as Detering et al. U.S. Patent 6,395,197, teaches an on-board plasma quench reformer system for hydrocarbon fuel such as a natural gas fuel. In the on-board plasma quench reformer, either liquid natural gas or compressed natural gas is vaporized and converted into hydrogen and a selection of carbon compounds including carbon dioxide, carbon monoxide, and elemental carbon. The hydrogen is then supplied to the internal combustion engine as a reformed fuel source. The carbon is not combusted, and greenhouse gases are not produced. See column 5, lines 25-35. The reference is silent to charging carbon-rich residue to a combustor, and utilizing at least a portion of the terminal energy produced in the combustion to heat the means for absorbing and releasing thermal energy to a temperature for effecting pyrolysis in the next succeeding cycle of the method. Therefore, the instant claims are patentably distinct from Detering.

CONCLUSIONS

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
